

Dr. Christopher Ganz, ABB Technology Ltd, Group Service R&D Manager

Internet of Things, Services and People Opportunities for Advanced Services

The Internet of ...

Global trend – 4th industrial revolution

Industry 1.0 – 1712

First practical steam engine

Industry 2.0 – 1870

First elevated conveyor belts

Industry 3.0 – 1969

Electronics / software based control

Industry 4.0 – today and tomorrow

Internet of ...

Services

People

ABB leads proactively with new connected offerings

The Internet of Things

ABB things

Things

The Internet of Things (IoT) is the network of physical objects or "things" embedded with electronics, software, sensors, and network connectivity, which enables these objects to collect and exchange data [1]

The Internet of Things allows objects to be sensed and controlled remotely across existing network infrastructure [2]

Smart, communicating devices by ABB

Motors

Switchgear

Controllers

Optimizing maintenance and operations

Combining plant view with fleet view

Fleet view

Data analysis across a fleet of devices installed in different sites

Data analytics potential:

- Predictive maintenance
- Benchmark
- Asset lifecycle optimization
- Usage-driven product improvement

Focus on maintenance optimization

Plant view

Data analysis across a site or a number of similar sites

Data analytics potential:

- Data engineering
- Process performance optimization
- Energy efficiency optimization
- Operational excellence

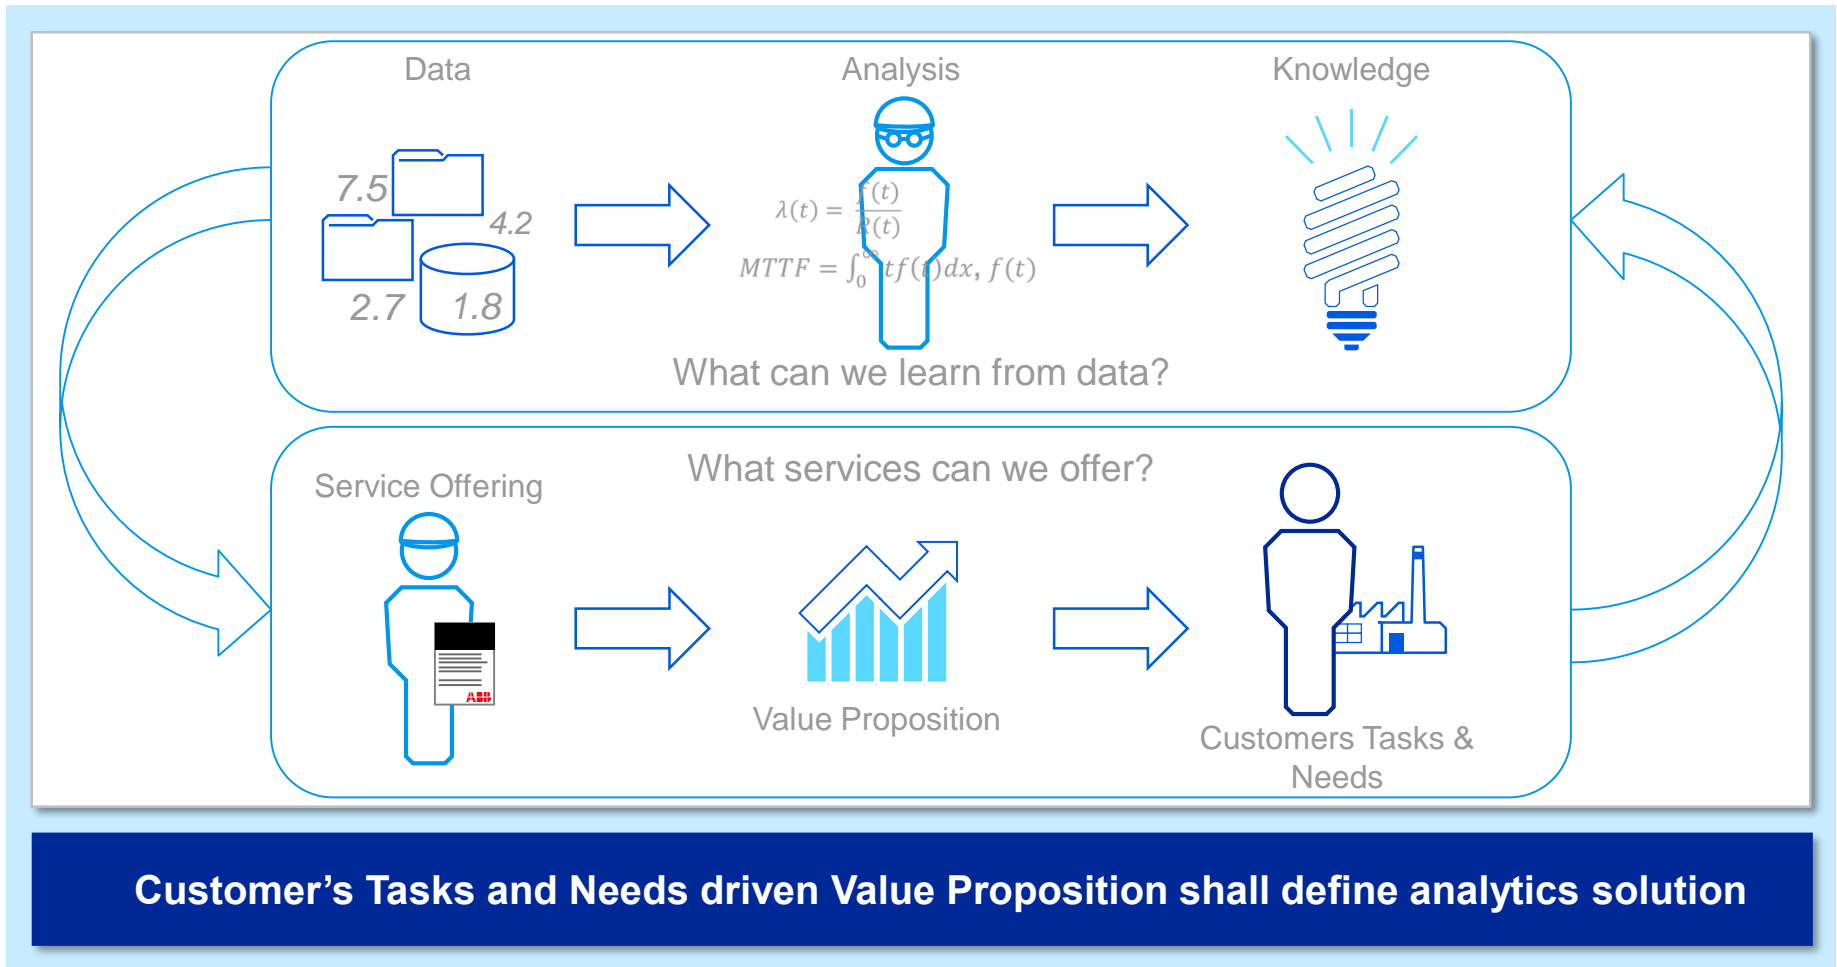

Focus on operations optimization

**Unique combination of asset focused maintenance optimization
vs. plant focused operations optimization**
